

# Approach to presenting papers

General overview:

1. Introduce **the problem**: What were the authors attempting to solve?
2. Outline the **methods**: What approach did they use? Go into some depth here.
3. Go through the **results**: Usually this will be a series of figures/tables. Talk through each. Point out strengths and weaknesses. Are there analyses you wish the authors had included that aren't in the paper?
4. **Conclude**: What did you learn? What are key take aways? Did the authors point out areas for future work?
